DR. JAEGER'S SYSTEM

WOOLEN SANITARY

BRANCH:
119
Nassau St.
TEMPLE COURT
Building.

BRANCH:
504
Fulton St.
BROOKLYN.
N. Y.

New York.

Main Office and Retail Warerooms,
827-829 BROADWAY,
NEAR 12TH STREET, NEW YORK.

Wholesale Office and Wareroom,
97 FRANKLIN STREET,
NEW YORK.

MEMORANDA

To which Attention is respectfully Solicited.

THE PRICES named in this Catalogue are for CASH, WITHOUT DISCOUNT, to all purchasers.

REMITTANCES may be made by Express Money Orders, Checks or Post-Office Orders, payable to the order of "DR. JAEGER'S CO."

CORRESPONDENTS will kindly remember to give their full post-office address; also, when they send an order, to advise how their goods shall be forwarded. In the absence of special instructions, we shall send by nearest Express Company.

For all GARMENTS MADE TO ORDER, the Charge will be 25 per cent. higher than the Catalogue Prices.

DISTINCTIVE FEATURE:

All Wool! All the Year 'Round!

FOR MEN, WOMEN AND CHILDREN.

SPECIAL NOTICE TO THE TRADE.**DR. JAEGER'S SANITARY WOOLEN SYSTEM CO.**

827-829 BROADWAY, NEW YORK.

WHOLESALE OFFICE, 97 FRANKLIN ST., NEW YORK.

We call attention *to the Superior Merits of the goods manufactured under the "SANITARY SYSTEM" of Dr. Gustav Jaeger, and offered to the Trade on profitable terms.*

Dr. Jaeger's SANITARY CLOTHING, UNDERWEAR and BEDDING are not medicated. Their sanatory virtues are due to natural properties inherent in the material, and to the construction of the garments.

HAVING THE SOLE OWNERSHIP of these goods for the United States, and being protected by our Trade Mark, we are in a position to offer **very superior advantages to merchants** handling our goods.

We shall aim, so far as practicable, to limit our sales to a single House in a city, and wholly to those whose trade and reputation are well established.

OUR LINE OF UNDERWEAR is **exceedingly popular**—more so than any fine goods ever before offered—comprising **EVERYTHING WORN BY MEN, WOMEN AND CHILDREN.**

Merchants, beginning business with us, can promptly replenish their shelves from our Wholesale Stock, in New York, which will uniformly be kept complete in styles and qualities.

The goods offered are strictly First Class in every way; are perfectly adapted to the requirements of the BEST FAMILY TRADE, and Merchants will find a full line of Dr. Jaeger's Sanitary Woolen System Goods at once ELEGANT, ATTRACTIVE and PROFITABLE.

We solicit correspondence and inspection.

DR. JAEGER'S CERTIFICATE.

I Have Assigned to DR. JAEGER'S SANITARY WOOLEN SYSTEM COMPANY, Nos. 827 and 829 Broadway, New York, the sole right in the United States and Territories of the use of my name, publications respecting my System, patents, trade marks, etc., and the sole right to sell in the United States and Territories all articles of Clothing, Bedding, etc., in connection with my Sanitary Woollen System, and stamped with the Trade Marks. I guarantee that the materials of such articles made by the authorized manufacturers consist throughout of animal fiber (animal wool, hair, feathers), without any mixture of vegetable fiber; also, that articles described to be of the natural color are free from dye, and that dyed articles are only treated with genuine and harmless dyes.

STUTTGART, January, 1886.

PROF. DR. G. JAEGER.

We publish a Valuable Work entitled

(Translated from
the German.)

“SELECTIONS FROM ESSAYS
ON
HEALTH CULTURE
AND THE
SANITARY WOOLEN SYSTEM,”

BY GUSTAV JAEGER, M. D., STUTTGART,

Professor of Zoology and Physiology.

8vo, Cloth-bound, 200 pp.

Price, 25c.; post free.

FOR THE UNITED STATES AND TERRITORIES.

EMERSON.

DR. GUSTAV JAEGER'S

CLOTHING REFORM

FOR

Men, Women and Children.

THE, INDISPUTABLY, PERNICIOUS EFFECTS, upon health, due to the material and form of the ordinary clothing of the present day, were hardly suspected until Dr. GUSTAV JAEGER, of Stuttgart, began to publish the results of his investigation on the subject.

This distinguished German physician has established the fact, that most bodily derangements may be prevented or cured, or greatly alleviated, by the adoption of proper clothing; and he has constructed a system based on the principle of pure, animal fiber, for clothing and bedding. Hence the "DR. JAEGER SANITARY WOOLEN SYSTEM." It affords to the body the greatest protection against Cold, Heat and Dampness, with the least obstruction to the body's exhalations. These conditions are instinctively felt to be better fulfilled by woolen, than by linen or cotton fabrics. Hence the very general use of flannel garments by athletes and by members of cricket, boating, and other sporting clubs, who are called upon to engage in vigorous, physical exercise likely to cause profuse perspiration, which is simply an intensification of the action of the skin, incessantly going on, with more or less activity, and ceasing only with life itself. Dr. Jaeger reasons as follows: If this action of the skin be imperfect, impeded, or repressed by any cause, fat and water accumulate in the tissues, the functional powers of which are lowered and weakened; and the flesh, which should feel elastic, firm and hard, becomes soft and flabby, resulting in a general derangement of the physical organization; and the evil effect on the body is experienced in the form of many disorders which are erroneously considered to be more

SOLE IMPORTERS AND EXCLUSIVE MANUFACTURERS

or less inevitable and ineradicable, such as corpulence, asthma, pulmonary complaints, diseases of the digestive organs, gout, rheumatism, etc.

All fabrics manufactured from, or adulterated with, vegetable fiber, (linen or cotton,) or silk, are impervious to the body's exhalations, which are arrested and turned to water on the skin, if, at any point, underclothing or lining of such fiber, intervene, between the body and the outer atmosphere. Linen and cotton are, moreover, good conductors of heat, and thus, especially when damp, readily cause a chill. Further, *dead* vegetable fiber has the same property that the living plant has, of absorbing noxious gases, but it cannot, like the plant, digest or assimilate them.

In view, therefore, of the importance of maintaining a healthy and normal action of the skin, not only for persons of active habits and pursuits, but especially for those engaged in sedentary occupations, Dr. Jaeger selects Animal wool as the proper substance for his "Sanatory Clothing," and *rejects all linen, cotton and silk for underwear and for bedding*, as obstructive of the natural processes of absorption and evaporation. The advantages of this material seem obvious, as, when woven into tissues, wool possesses above all textile fabrics —

1. *A peculiar power of absorption and transmission;*
2. *The properties of a non-conductor of heat—so essential to the preservation of an equable temperature of the body;*
3. *The property of promoting the elimination, from the tissues, of all excess of fat and water, thus making the flesh firm, and hardening and toughening the muscles.*

As hitherto woven, woolen fabrics are objectionable to many because they irritate the skin and cause a feeling of intense discomfort, by preventing the proper escape of the exudations of the skin, and, as a rule, they are so heavy as to be intolerable for summer wear. To remove these objectionable features, and to make woolen clothing truly sanatory, and suitable for all seasons — protecting from oppressive heat in summer and maintaining a proper degree of warmth in winter — Dr. Jaeger has materially modified the usual processes of weaving woolen fabrics, and adopted a method which produces a much less closely-woven texture than the ordinary flannel; and all underwear for ladies, gentlemen and children is made of "Stockinet," undyed or natural gray, very porous, agreeable and durable.

From these conditions, together with the conformity in construction of the garments to the human anatomy, arise what Dr. Jaeger specifically claims as

THE SANITARY ADVANTAGES OF PURE ANIMAL WOOL.

I. Wool "gently stimulates the skin," *i. e.*, to that degree necessary to excite and maintain its normal activity in secreting and extruding the waste matter, and surplus fat and water of the body.

II. Wool, relatively to linen and cotton, is a non-conductor of heat and electricity, and, therefore, tends to preserve to the animal body its normal measure of these vital energies.

III. Wool, woven and made up according to the Jaeger methods, by reason of its permeability to moisture, (the vaporous exhalations of the skin,) promotes the elimination of the effete matters, and the reduction of the abnormal or excessive heat of the animal body; and this is the reason why *the body, even when freely perspiring, remains dry in woollen clothing*, while in linen or cotton, it becomes wet—a fact of common experience with all who engage in athletic exercises.

IV. Wool thus co-operates with the skin to regulate, by its exhalations, the temperature of the body, the wool supplementing the efforts of the skin to dispose of excess of heat, whether proceeding from internal or external sources, thus maintaining that equable state which is the true condition of health and comfort. Hence it is, that wool is better than linen or cotton as a preventive of the overheating of the blood, through internal heat; and that woollen clothing is less oppressively hot than linen or cotton in summer, and, therefore, more agreeable and healthful in the hottest climates.

V. Wool is electrical, while linen and cotton are not; *i. e.*, wool generates electricity, but does not conduct it. It follows, therefore, that a body clothed in wool loses less of its animal electricity, while fresh electricity is produced on the surface. Most people are familiar with the facility with which the human body conducts electricity. Cotton ranks next to it as a conductor, while wool is classed with non-conductors and insulators, and, for that reason, is called an electric, or generator of electricity. When the air is clear and dry, place a person upon a stool or chair, the legs of which are supported from the floor by glass tumblers, and beat him gently on the back with a woollen or camel-hair shawl, and sparks may be drawn from his nose, or fingers, from one-fourth to three-fourths of an inch long—or large enough to light the gas of a burner, or to charge a Leyden jar. Probably every reader has seen and heard elec-

tric sparks on withdrawing a woolen stocking—never from taking off a cotton one. There is no manifest electricity, in the latter case, because the cotton fiber conducts it away—dissipates it.

The Sanitary Woolen System is, therefore, salutary for those whose bodies are deficient in animal heat or electricity. With persons leading sedentary lives, the action of the skin is deficient, and it requires the stimulating aid of the woolen clothing, which materially assists in eliminating from the tissues the excess of water and fatty matter always tending to accumulate when insufficient exercise is taken.

The System checks the tendency to congestion of blood in particular parts, as in the head—causing vertigo, headache, ringing in the ears, apoplexy, etc.—and in the chest, causing pains, asthma, coughing, etc., and tends to prevent the setting in of lung disease, hemorrhoids, spitting of blood, and other fluxions of blood.

The System is salutary in cases of Catarrh, accumulation of phlegm fluxions and gouty affections, disorders of the digestive organs, &c., and for nervous, hypochondriacal and hysterical persons, whose health is especially dependent on the unimpeded action of the skin. It is salutary during, and after all serious illnesses, tending to alleviate the severity of the attack, and to prevent relapses; and is very beneficial to persons sensitive to changes of temperature. In a word, there can be no better protection against heat, cold, wet, electric and other atmospheric influences. It is, therefore, indispensable to people living in climates or conditions subject to sudden changes.

It is hardly possible to give too much prominence to the fact, that Sanatory Woolen Clothing affords great protection to those exposed to the infection of DIPHTHERIA, CHOLERA, TYPHUS, the PLAGUE, DYSENTERY, the SMALL POX, as well as the MEASLES and CHICKEN POX; a fact which Dr. Jaeger has abundantly demonstrated on scientific ground, and with rigorous practical tests. (See "Health Culture," p. 79.)

THROAT AND CATARRHAL AFFECTIONS.

All persons afflicted with any degree of bronchial, laryngeal or catarrhal affections of any kind, have noticed how suddenly the unpleasant symptoms are aggravated by the slightest chill or access of cold, and how careful they have to be, to avoid exposure to drafts and changes of weather.

In all these cases the Sanatory Woollen Clothing is both curative and preventive. *It acts upon these diseases by assisting the efforts of the skin to expel the morbid secretions whose suppression and retention in the body is the cause of these disorders.* The Sanatory Woollen fabric takes up, carries off and disperses the impurities of the cutaneous excretions. Even the well man is not independent of precautionary measures. A present sense of health and comfort is no excuse for neglecting any means calculated to preserve or increase these desirable conditions. The strong man of to-day, by a single imprudence or slight unconscious exposure, may be feeble and sick to-morrow.

Chills caused by draughts, or colds, damp clothes or bedding, are very dangerous, because the sudden suppression of the cutaneous exudations interferes with the circulation of the blood, thus disturbing the action of the lungs, the liver, the stomach, etc., and setting up conditions favorable to inflammation and fever.

Their *modus operandi* may be summarized as follows:

The exhalations which are mal-odorous and noxious by reason of defective excretory action, are generated in the body during and after the digestion of food, during all vital action in fact, or when the body is invaded by disease, or the mind is at work, or disturbed by worry, gloom, anger or fear, or indeed by any violent passion or strong emotion. For every act of mind or body is attended with destruction of tissue, constituting so much waste matter, which becomes poisonous and potent for mischief, if not duly eliminated from the body. This elimination, it is the function of the skin, in an eminent degree, to do. The sudorific or sweat glands and their ducts are charged with this important office. There are about 7,000,000 of these little scavengers opening at the surface of the skin of an averaged-sized man, throwing off from the surface from 28 to 32 ounces of refuse matter every 24 hours. The action of even a small portion of them cannot be suspended without disturbance and danger.

The body not only gives off its exhalations to the surrounding air, but also communicates them to all objects with which it and its atmosphere come in contact.

Metallic substances, glass, and wood of which the pores are closed by paint, varnish, etc., are practically impervious to the exhalations, while the two classes of material next mentioned absorb them, but in a very different degree.

I. All vegetable fibers, such as linen, cotton, hemp, jute, paper, unvarnished and unpainted wood, silk, and *unsanitarily* dyed or dressed wool and leather, attract and absorb these "noxious," "self-poisoning" exhalations, and become, when in contact with human beings, gradually offensive and even poisonous in their effect. Clothing, (including linings and padding,) and bedding made from such fibers, are agreeable and wholesome only when quite new and just washed, but soon become saturated with the "noxious" exhalations, producing discomfort, and, if wet, when the vapors are set free, becoming especially dangerous.

II. All kinds of animal wool and hair, leather, (undressed, or sanitarily dressed and dyed,) feathers, horn, readily absorb all the excretions of the skin, but they do not retain them, but transmit, and disperse them at their outer surfaces, by a repulsive energy to which the self-cleansing properties of hair and wool fabrics are properly due. The value of this feature of the woolen system, more particularly with reference to its surgical uses, is hardly to be exaggerated.

To secure its full benefits, the System should be adopted in its entirety. A beginning may be made with underclothing, which is of the first importance. The outer clothing should be constructed after the Sanitary styles. The upper and lower coverings of the bed should be woolen, or camel hair. The sleeping suit should be a stockinet night-shirt, long, light, soft and elastic; or a woolen shirt with a combination consisting of drawers and socks.

The stimulation, temporarily caused by cold baths, in the comparatively stagnant blood-vessels on the surface of the bodies of wearers of ordinary linen or cotton clothing, is permanently supplied by the Sanatory Woolen Clothing. Wearers of the latter need not, therefore, rub the body dry after a bath, but in hot, dry weather they may even apply a wet sponge over the shirt before putting on the outer clothing. This may be done without danger, and the evaporation which ensues, counteracts the tendency to an excessive rush of blood to the surface of the body, and adds greatly to the refreshing effect of the bath.

Time is required for the realization of the full benefits of the Sanitary Woolen System; and those who adopt it should not be alarmed, misled or discouraged by symptoms consequent on the efforts of the skin to expel, through its secretions, any elements of disease previously retained in the body, from the repression of the exhalations by the ordinary, unsanatory

clothing or bedding. In such cases the System performs an inestimable service, as, until these secretions are expelled, no permanent recovery is possible.

The Sanitary Woolen System does not pretend to promise perfect health under all circumstances, any more than it promises to perpetuate existence. But wide experience has shown, that, by its adoption, *disturbances of health are less frequent*, and, when they do occur, sooner pass away, and seldom result in chronic disease. *The relief afforded to even the healthy body by its release from the confinement of the ordinary, unsanitary clothing, is evinced by a previously-unknown sense of health, vigor, buoyancy and energy.*

The Sanitary Woolen System has proved an effectual and lasting cure for diseases (and there are many) caused through the enervation of the tissues of the body by the action of its own, or external, "noxious" vapors, and the System thus supplies an important gap in the science of healing.

THE FUNDAMENTALS OF DR. JAEGER'S SYSTEM AND THEORY ARE:

1. Animal wool is a material provided by Nature for the clothing of an animal body.
2. Man, being an animal, can be clothed naturally or properly only in animal clothing.
3. Woolen Clothing exerts its beneficial influences by virtue of its non-conductivity to heat and electricity, and its permeability to moisture.

These properties of the Dr. Jaeger Woolen Fabrics, and their relation to the functions and exhalations of the skin, constitute the basis of the Dr. Jaeger Sanitary Woolen System.

THE DISTINCTIVE FEATURES OF DR. JAEGER'S SANITARY WOOLEN SYSTEM ARE:

1. "All wool," "All the year round," for all articles of clothing for men, women and children.
2. A highly-porous fabric.
3. Rejection of all noxious dyes.
4. A cut and make that give special protection to the vital organs.

The system is so allied to man's constitution, and is so connected with all vital processes, that a full comprehension of it will not be acquired without some knowledge of man's anatomy and physiology. It is true that the most intelligent on these matters, are the first to embrace and support the doctrines and theories of the distinguished German scientist. And for those who desire to understand his theories, as well as to profit by his discoveries, a way is provided by his publication, entitled "Health Culture"—a book replete with information, common-sense and sound reasoning, and most important practical suggestions, based on his own observations and experiments, concisely stated and unobscured by scientific technicalities. It contains a clear exposition of his theory, with examples illustrative of his discoveries and principles. It can be had at a trifling expense, and will amply repay, even the general reader, the time given to its perusal.

The following is the testimony of a high authority upon the value of Dr. Jaeger's book. W. H. Dixon, M. D., 35 Frederick Street, Sunderland, Eng., writes, September, 1884 :

"How much health and comfort depend upon the construction and substance of dress is scarcely at all understood. This subject has at last been scientifically studied and ably expounded by Dr. Jaeger, of Stuttgart, whose little book on Health Culture and the Sanitary Woolen System, ought to be read by every intelligent person. The thanks of the public are really due to Dr. Jaeger for the eminently useful and instructive work."

Here is a home witness whose testimony will be appreciated by the American public. Julian Hawthorne (in the "New York World") says :

"Every man and woman in America ought to read the little volume on 'Health Culture and the Sanitary Woolen System,' by Dr. Gustav Jaeger, of Stuttgart, of which a translation is published by Dr. Jaeger's Sanitary Woolen System Co., 827 Broadway. It is in some sort a trade publication—an advertisement of a business firm—but it is not on that account the less valuable. Besides a great deal of wise counsel regarding diet, ventilation and kindred subjects, it shows the high advantages of woolen over other material for clothing, not only as a preservative of health, but as a cure and preventive of many diseases. It is impossible to resist the Doctor's arguments, founded, as they are, on science and practical experiment ; and the language in which the essays are written is entirely devoid of technical difficulties, and has a familiar tone which renders the little book intrinsically pleasant reading. The value of the Woolen System in the clothing of children cannot be exaggerated, and those parents who have seen how their children thrive by it, will not be slow in adopting it for themselves. The Jaeger Company will not benefit more than their customers."

CAN WOOLEN GARMENTS BE MADE SUITABLE FOR SUMMER WEAR?

The feeling is instinctive that woollen clothing is "hot" in warm weather; that if we wear wool in winter to keep us warm, we must wear something different in summer to keep us cool, or be inconsistent in theory and practice.

It is obvious to all how a non-conductor of heat — a woollen garment, for instance — prevents the escape of the heat of the body to a colder atmosphere, or the ingress of heat to the body from a warmer atmosphere: a familiar illustration of which is found in the practice of wrapping ourselves in blankets to keep us warm, and wrapping ice in a blanket to keep it cold — to keep the heat *in* in the one case and *out* in the other. But it is not so easy to understand why we should clothe a warm body in a blanket to cool it off, or keep it cool, when the surrounding air is in or near equilibrium with it.

But the explanation lies in —

1. The nature and condition of the body.
2. The woollen fabric's two-fold property of non-conductivity to heat, and permeability to moisture; and,
3. The evaporation of the moisture at the fabric's outer surface. This evaporation disperses the heat, thus lowering the temperature. This is the reason why the soldier keeps his woollen-covered canteen wet in hot weather. On this principle, the Central American makes his porous, clay jar, through which the water percolates, and by surface evaporation keeps the water inside from 10° to 15° colder than the outside atmosphere. And thus it is that a wet, woollen garment disposes of the *surplus* heat, which causes excessive perspiration, and leaves the body cool; while a wet linen garment leaves the body *cold*, thus suddenly closing the "pores," stopping the exudations, and turning them back to overtask some other excretory organ, or to sow the seeds of disease in the human system.

Is it necessary, or important, that all the clothing next to the skin, should be woollen? If all the skin were coated with varnish or plaster of Paris, death would ensue in a few hours, from the total suppression of the cuticular excretions. Can any one doubt, that a partial suppression would work proportional mischief?

All articles are manufactured of the finest and purest sheep's or camel-hair wool, WITHOUT ANY ADMIXTURE OF LINEN OR COTTON, OR TRACE OF NOXIOUS DYES. The great prevalence of the practice of adulterating woollen fabrics with cotton, and the free use of injurious dyes, make this a most important consideration. To healthy persons, the timely adoption of Dr. Jaeger's Sanatory Woollen Clothing, will prove an excellent defence against bodily disorders from climatic and other influences; while its use will be attended with most beneficial results to those whose constitutions are not robust, or to those whose health is impaired—especially to sufferers from asthma and other pulmonary complaints, affections of the chest, gout, rheumatism, disorders of the digestive organs, etc. The Sanitary Woollen System acts on such diseases by assisting the efforts of the skin to expel the morbid humors.

DR. JAEGER'S SANATORY WOOLEN GARMENTS NOT "MEDICATED."

It may be well to declare explicitly that the Sanatory Clothing and Bedding of Dr. Jaeger's System, do not consist of "medicated" fabrics, but that *their sanatory efficacy is due to special modes of construction, and to properties inherent in the very fiber of the material, which are, therefore, as durable as the fabric itself.*

Woolen fabrics woven according to Dr. Jaeger's process—the garments constructed after his methods—do not deplete and weaken, but harden, toughen and invigorate; they do not irritate the skin, but soothe and comfort; they are not "hot" in warm weather, but cool in summer and warm in winter; the underwear is not coarse, rough nor cumbrous, but fine, smooth and "soft as silk"; the outer clothing is not uncomely, nor unbecoming, but are as attractive and stylish as any woollen fabrics ever produced, and admirably suited to dress occasions; none of these garments are sticky, gummy, nor retentive of offensive odors, but are more cleanly, both for clothing and bedding, than any other material ever used for such purposes.

In a word, *the whole tendency of the Sanitary Woollen System is to* STRENGTHEN THE WEAK AND PRESERVE THE STRENGTH OF THE STRONG.

These are its claims, and they are well supported by the theory, the facts and the testimony.

CAUTION!

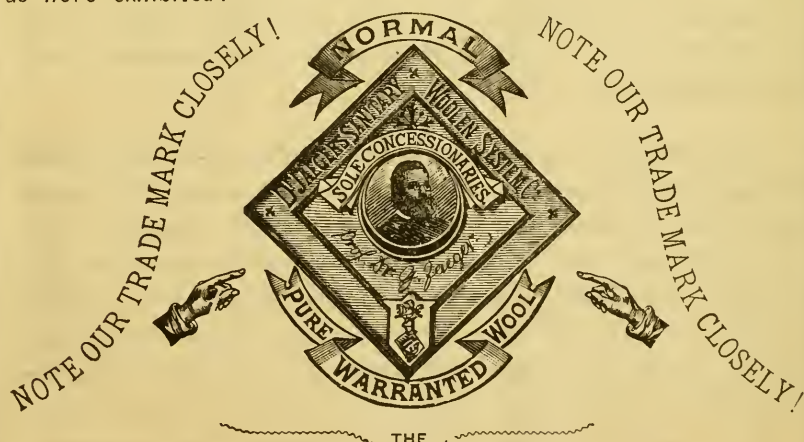

Unscrupulous Dealers in Woolen Fabrics, —
 seeking to take advantage of the

EVER-INCREASING POPULARITY OF

OUR SANATORY WOOLEN UNDERWEAR,

are putting upon the market spurious articles, manufactured in imitation of Dr. Jaeger's Goods and Brand. All of the

GENUINE GOODS ARE STAMPED WITH OUR REGISTERED TRADE MARK, as here exhibited:

Genuine Sanatory Underwear

IS MANUFACTURED BY

The Renowned Firm of Wilh. Bengel Söhne,
 OF STUTTGART,

Under the Supervision of Dr. G. Jaeger.

SOLE IMPORTERS AND EXCLUSIVE MANUFACTURERS

"THE FRAUD DETECTED."

SANATORY WOOLENS VERSUS FRAUDULENT IMITATIONS.

"Whenever there is put upon the market a new commodity which proves to be better than anything in the same line preceding it, and which wins its way to popular favor, it is pretty sure to have, soon, to compete with imitations. In no instance has this fact been more strikingly illustrated than in the case of the sanitary woollens of the Jaeger System. The imitations are so numerous, that it may be said, their name is legion. Goods offered as all-wool, 'Jaeger' underwear, stamped with the word 'Normal'—the property of the Jaeger System—and purporting to come from Stuttgart, the source of the genuine Jaeger importations—with other devices calculated to deceive, can be found in almost every city in the United States. One of these has been sent to the Jaeger Sanitary Woolen System Company, at 827 and 829 Broadway, for analysis—the only way in which the fraud can be detected, since the ultimate fibres of the wool and cotton are combined in the same thread. This analysis is done chemically and by the microscope. Under a glass of from 300 to 500-diameter power, the Jaeger wool filaments are clearly seen to be all alike in all general characteristics. They are shown to be tubular, and cylindrical in form, and to be marked with wavy, transverse lines, denoting the imbricated scales, upon which the property of felting depends. On the other hand, the cotton fibre is tape-like, resembling a flattened tube, devoid of the cross lines, and generally somewhat twisted, like an auger. A tuft taken from the spurious article, so closely resembling the genuine that none but the most skilled expert would even suspect anything wrong, shows, under the glass, the woolen and cotton fibres interlaced, in the proportion of about 33½ per cent. of the latter.

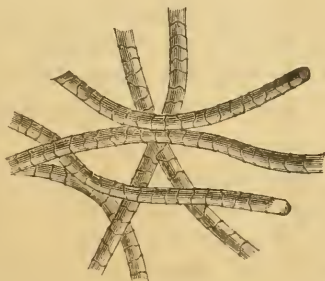

"But the chemical test is by far the more striking. A remnant of the Jaeger fabric, thrown into a strong, hot solution of caustic soda, wholly disappears in a few seconds, leaving only a brownish liquid behind—the discoloration being due to the decomposition of the dark-hued wool, which, when mixed with the white, gives the 'natural-gray' color.

"The almost pure gelatine, of which the woolen fiber is composed, is rapidly dissolved in the caustic solution, while upon the cotton fiber, the solution has no appreciable effect. So, when a clipping from the imitation garment is immersed in the solution, the woolen component at once disappears, leaving a patch of well-woven, cotton network behind, looking very much like a piece of fine mosquito-bar. [*]

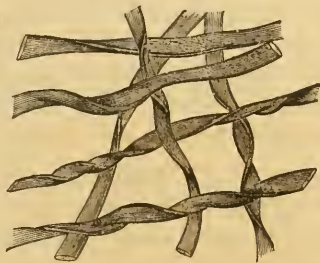

"The result shows not only the grossness of the fraud, but the ingenuity with which it is perpetrated."—*The Daily Standard-Union*, Brooklyn, N. Y.

Microscopic views of woolen and cotton fibers as revealed in the above-described analyses.

The cuts on this page, represent microscopic views of the woolen and cotton fibers as revealed in the above-described analyses.

WOOL FIBERS.
(Magnified 485 diameters.)

COTTON FIBERS.
(Magnified 485 diameters.)

* When, in the adulterated fabric, the cotton fiber is not spun in with the woolen, the former will be found in the solution in the form of an entangled mass of filaments.

DR. JAEGER'S
SANATORY WOOLEN UNDERCLOTHING,

Manufactured by the Renowned Firm of WILH. BENDER SÖHNE, of Stuttgart,
UNDER THE SUPERVISION OF DR. G. JAEGER.

*In presenting this Descriptive Catalogue and Price List,
the Company beg leave to say:*

NO SUCH GOODS WERE EVER BEFORE OFFERED TO THE AMERICAN PUBLIC. They EXCEL in every textile quality; in fineness of wool; in softness and delicacy of texture in various weights, from the lightest summer quality to the heaviest winter wear; and the PECULIAR MODE OF WEAVING the "Stockinet," of which they are all constructed, imparts an elasticity, with life and freshness, not to be found in goods of any other manufacture.

In the manufacture of this Underwear, the Natural Gray, or White, Wool is used, and, being UNDYED and of the FINEST QUALITY, is so soft and pliable as to be, not only NON-IRRITATING, but positively pleasureable to the most delicate skin. Each garment is made DOUBLE OVER THE CHEST AND ABDOMEN, thus affording needed protection, at all times, to the vital organs, and CONDUCTING TO THE GENERAL HEALTH. There is abundant reason to believe that all those who adopt the Dr. Jaeger Woolen Underwear, will be nearly, if not entirely, PROTECTED AGAINST ATTACKS OF PNEUMONIA.

And with this NORMAL SANATORY WOOLEN UNDERWEAR, we advise all who are not yet prepared to adopt the system in its entirety, to make a beginning.

THE STRUCTURE AND INFLUENCE of the fabric is such as to produce a GLOW OF HEALTH on the body's surface, while the anatomical and physiological adaptation of the garments greatly lessens, if it does not wholly avert, the danger of taking cold from the sudden changes so peculiar to our climate.

It is a STRIKING AND SIGNIFICANT FACT, that CHILDREN reared under this system of clothing are far more ROBUST AND FREE FROM DISEASE than members of the same family who wear the ordinary clothing. All persons who have the least tendency to neuralgia, rheumatism, rheumatic gout, gouty deposits in the joints, or who are debilitated from any cause, will find that the benefits derived from the use of these goods, both day and night, will be immediately apparent, and generally permanent.

DR. JAEGER'S SANATORY WOOLEN GOODS.

DIRECTIONS FOR WASHING.

The clothes should be placed to soak in water (at about 100° Fahr.—as hot as can be borne by the hand) in which soap has been boiled.

To about every six gallons of water (or sufficient for washing six large garments and several smaller articles) add three tablespoonfuls of liquid ammonia, which removes grease

deposited by perspiration.

Any good soap may be used, but **Ammonia Soap**, which combines ammonia in the proper proportion, is recommended. It is supplied by the Company at **50c.** per 2-lb. tin can. The proportion to be used is $\frac{3}{4}$ lb. to 6 gallons of water.

Cover the clothes well, as the retained heat assists the removal of grease.

After an hour's soaking, wash out, by drawing through the hand. *Avoid rubbing.* Very dirty spots should be brushed with a soft brush.

To thoroughly remove the soap, rinse out twice in lukewarm water.

The use of a wringer is recommended, as it expels the water with the least friction.

Hang the clothes up lengthways to dry.

Iron *while still damp*, stretching the article to the necessary length and width. The iron should not be unnecessarily hot.

No soda or lye should be used.

The odor of the ammonia disappears when the soap has been removed.

NOTE.—Experience has shown that the shrinking of Woollen Clothing is influenced by the nature of the perspiration given off by the wearer; especially when the clothing is first adopted, and its salutary effect causes the skin to expel the excretions previously repressed and retained.

FOR THE UNITED STATES AND TERRITORIES.

MEN'S NORMAL SANATORY UNDERWEAR.

—————

All the various styles of Shirts and Underwear and Drawers, in order to give Special Protection to the Thoracic (Chest) and Abdominal Organs, are made double in thickness in front.

The Opening is on the Shoulder, thus preventing the admission of cold air to the skin over the vital organs.

The NORMAL SHIRT can be worn either as an undershirt or (as is the true Jaeger idea) as an outer shirt, being so constructed that the *ordinary Collars and Cuffs can be attached* in the same manner as with the cotton or linen shirts. The ordinary, flat scarf and high-cut vests so effectually conceal the shirt that *thousands have adopted these garments*, not only for their Sanitary value, but on the score of true economy, and have discarded the linen and cotton shirt as both un-sanatory and useless.

This Normal Shirt is particularly recommended *to Traveling Salesmen*, and to all whose business calls them, mornings and evenings, from well-heated offices or stores to out-door exposure.

—————

MEN'S NORMAL SANATORY UNDERSHIRTS.

—————

These Garments give greater satisfaction than any other ever brought to the United States.

Sir Henry Clavering, of Blaydon-on-Tyne, writes that he "Has found great benefit from wearing D. Jaeger's Sanatory Vests, they having entirely cured him of a cough, which no medicine could do."

MEN'S NORMAL SANATORY UNDERSHIRTS.

In Natural Gray Wool.

DOUBLE THICKNESS OVER THE CHEST.

Measurement of neck not required in ordering these Undershirts: Allow two to four inches more than the exact chest measurement beneath the vest.

QUALITY B UNDERSHIRTS SHOULD BE WORN WITH QUALITY A DRAWERS.

Although this Undershirt is the true Jaeger Shirt, buttoning on the shoulder, and of double thickness over the entire front, thus giving special protection to the Thoracic (Chest) and Abdominal Organs, we can supply those who prefer it, with the same garment made to button in front, in the "GAUZE," "K" and "KK" qualities. Gauze and K qualities of the "Open Front" Undershirts are made "single breasted," to suit the pleasure of those who insist upon the lightest-possible woolen garment for the warm summer season. The KK "Open Front" Undershirts are made of double thickness over the chest and abdomen.

MEN'S NORMAL SANATORY DRAWERS.

In Natural Gray Wool.

DOUBLE THICKNESS OVER THE ABDOMEN.

These are made of the finest material, afford an agreeable warmth, and are a protection against, and remedy for, disorders of the stomach, supplying the place of an abdominal bandage.

They are highly approved by the Medical Profession, and can be strongly recommended as a Sanatory form of underclothing.

When ordering Drawers, give both waist and inseam measurements.

MEN'S NORMAL NIGHT SHIRTS,

GRAY NATURAL WOOL, VERY SOFT.

Probably no garment of Dr. Jaeger's invention conduces more to health than this. As the plate indicates, they are double over the chest, and open only on the shoulder, thus affording *warmth to the vital organs in case of exposure at night*. They cover body and limbs with a soft, delicate texture of pure, undyed wool, exceedingly agreeable to the touch and highly conducive to health.

Those who suffer from *neuralgic* or *rheumatic* pains in the knee joints or elsewhere, when subjected to contact with linen or cotton sheets, experience none of these discomforts when clothed in these garments.

 When ordering, give length of sleeve from middle of back to wrist.

FOR THE UNITED STATES AND TERRITORIES.

LADIES' NORMAL SANATORY WOOLEN UNDERWEAR.

In no branch of the Dr. Jaeger System has more care been taken to secure a manufacture of *absolutely pure wool*, and that of the finest quality, than in the department of

Ladies' and Children's Normal Underwear.

The beautiful, soft, gray color of these goods is obtained by combining the white with the dark sheep's wool. Thus, by the complete repudiation of all noxious dyes, the pernicious, and sometimes fatal, effects incident to their use are wholly avoided, even in the case of the most delicate and sensitive infant.

The double thickness over the chest and abdomen, obtains with every garment of the Jaeger System. None hitherto made are so agreeable to the touch, and the finely-woven, Stockinet, elastic material ensures a high degree of warmth even with a very thin fabric, thus avoiding the heavy and unseemly appearance inevitable with goods of a thicker nature, or of cotton and wool combined, as in merino, etc.

Great caution should be observed, in purchasing, in order to secure those goods only, which are woven in accordance with the Dr. Jaeger's Sanitary System, as the market is already filled with spurious goods, made from inferior wool, and woven to resemble the popular, Jaeger fabric, and dyed gray in order to deceive. *No goods are genuine without our Trade Mark.*

LADIES' SANATORY UNDERVESTS.

DOUBLE THICKNESS OVER THE ENTIRE FRONT.

While this Undervest is the true Jaeger Vest, being double over the entire front, as indicated by the rows of buttons, we can supply, to those who prefer it, the same garment to button in front, made double thickness and affording the same protection.

This style
of Vests
in

Infants', Children's *and* Youths'

NORMAL SANATORY WOOLEN UNDERWEAR.

However neglectful of themselves, there are but few parents who are not watchful for the well-being of their children. For their little ones the very best is never any too good. This is one of the cases in which the heart is wiser than the head. The solicitude is rightly directed. Affection marshals them the way they should go. As the twig (of health) is bent, the tree's inclined. The mother's heart, above all, never ceases to take care. And in no one respect can that care be better bestowed than upon the question: Wherewithal shall they be clothed? The little new-comer is born to its clothes. And that is as it should be. The right beginning should be at the beginning. The first raiment should be of the right material and in the right form. Away with your belts, and bandages, wrappings, swathings and swaddlings, that confine the limbs, cramp the ribs and compress the bowels of the helpless sufferers.

When mothers come to realize what Dr. Jaeger has done for the deliverance of their little ones from the bands, bonds and tortures of the old methods, by his fine, pure, soft, wool, elastic, seamless INFANTS' BANDAGES; his CHILDREN'S VESTS, DRAWERS, COMBINATION SUITS, NIGHT DRESSES and SLEEPING COMBINATION SUITS—when they have once learned to appreciate these things, they will rise up and call him blessed. The man who, in the last quarter of the nineteenth century, has “revolutionized clothing” is, *par excellence*, the benefactor of the babies.

All that we have said on page 26, respecting the quality and beneficial effects of the Ladies' Normal Sanatory Underwear, is equally applicable to the articles in the Children's Department.

Children's and Youths' SANATORY VESTS,

IN NATURAL GRAY AND WHITE.

The Sanatory Vests for Children and Youths, being constructed double over the chest, afford great protection against colds, and prevent the disorders arising therefrom.

K and KK are also kept in White
(at 20c. more than Natural).

SANATORY SHAWLS.

The following engraving represents a very effective **CAMEL-HAIR SHAWL**, which is quite popular and desirable.

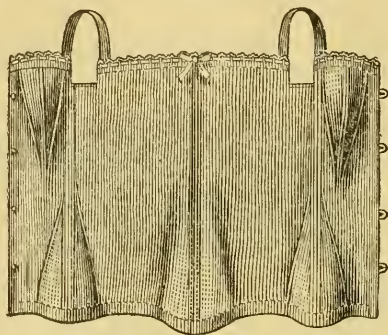

610/00, 743/000, 745/000—Camel hair; black, white and light natural; 50 inches square.	\$5 00
958/120—"Ice Wool"; 45 inches square.	2 00
958/150—" 60 inches square.	2 75
950/0— BREAKFAST SHAWL ; very soft fine wool; white and black; 35 inches square; can be worn as a head covering.	1 50
922— Plaid Traveling Shawl ; heavy; 72 inches square.	10 00

The above-described Shawls are manufactured expressly for us, and are adapted to American tastes and styles, with colors of approved sanatory quality.

THE DR. JAEGER SANATORY WOOLEN KNITTED NEGLIGÉE CORSETS,

With Light Steel and Bone; and of Soft Knitted Material, expressly manufactured for this purpose, from Pure, Undyed Sheep's Wool, in Natural Brown and White.

THE "NEGLIGÉE." Price, \$2.75.

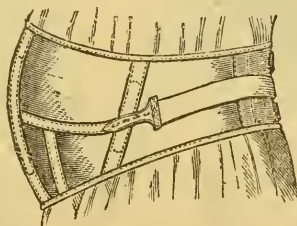

This Corset, in both White and Natural, being loosely knitted and elastic, is admirably adapted to the use of invalids and to others whose condition does not permit the pressure of the ordinary corset.

Like all the Jaeger garments, the woollen corset protects against the cold of winter and the excessive heat of summer.

When ordering, give size of corset usually worn.

DR. JAEGER'S HYGIENIC GERMAN BELT,

For Men and Women.

Adapted to the form, as shown by the plate. It is made of soft, gray, elastic, Quality K Stockinet.

DR. JAEGER'S KNITTED KNEE-WARMERS.

These devices of Dr. Jaeger are found to be a source of great comfort to those who are inclined to suffer from coldness in the knees, or from Rheumatism in that portion of the limb where the arterial circulation is less abundant than in the more-fleshy parts. They are both preventive and curative of this painful disorder, and tend rapidly to reduce swelling of the knees.

PATENT UNIVERSAL ABDOMINAL BELT.

(TEUFEL'S PATENT.)

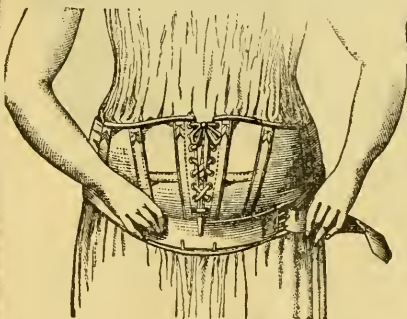

These Belts, made of the Finest Wool, are especially recommended as in accordance with Dr. Jaeger's Sanitary Woolen System.

(SUPPORT WITHOUT PRESSURE.)

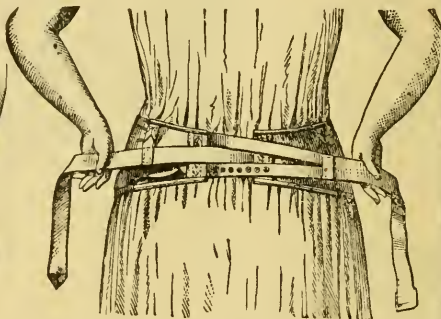

For Pregnancy, Corpulence, and all Abdominal Complaints.

Of the multitude of Belts hitherto devised, none has succeeded in satisfying the requirements of medical men or their patients. Owing to defective shapes, and other faults, the ordinary Belts fit badly, draw together, and work up, doing more harm than good, and completely failing of their purpose.

As the result of many years' experience, the patentee brought out, in 1869, an Abdominal Belt, which, for its original and excellent construction, was recognized as the best and most practical of its kind then existing. The patentee, however, has since that time striven to improve the Belt in directions suggested by the medical profession and by numerous patients.

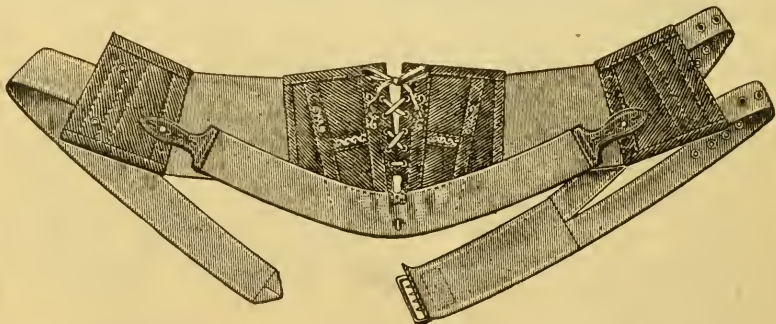

FRONT VIEW.

BACK VIEW.

The UNIVERSAL ABDOMINAL BELT is now offered as the perfected result of so much thought and labor. In its different forms, it will be found to apply to *every phase of the conditions cited in the above heading*. The peculiar advantages of its patented construction are, that it lifts and supports from below, *without pressure*, and may be extended or taken in at pleasure, and *never gets out of place* when properly put on. As it is very important that the Belt be put on correctly, careful attention is requested to the instructions enclosed in the box in which each Belt is packed.

A separate Illustrated Catalogue, showing the different forms of the Belt, with explanations of their uses, and indicating how the measurement should be taken, will be forwarded upon application. (In all lengths, from 28 to 42 inches.) Price, \$8.

We also call attention to our

MENSTRUAL BANDAGES.

(See "Special" Catalogue.)

SOLE IMPORTERS AND EXCLUSIVE MANUFACTURERS

DR. JAEGER'S SANATORY WOOLEN BEDDING.

In summer, the woollen covering permits the body to evaporate its surplus moisture, which linen bedding would retain; while in winter, when the body has no surplus heat, the non-heat-conducting properties of wool render it greatly superior to the chilly nature of linen. Moreover, damp wool will not chill, while damp linen or cotton sheets are a constant source of discomfort and danger.

A correspondent of The London Times, (Oct. 6, 1885,) who has adopted Dr. Jaeger's Sanitary Woollen System, writes:

"At night, in the winter months, my bed warms me, instead of my warming the bed, as used to be the case with linen or calico sheets."

CAMEL-HAIR BLANKETS AND LAP ROBES.

The Blankets and Lap Robes are made of the finest quality of undyed, natural-brown camel hair.

Dr. Jaeger states:

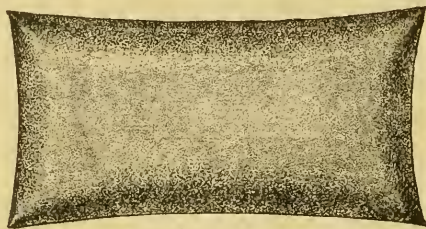

"The advantages of the natural-brown coverlets, consists in their freedom from all artificial dye; this I personally guarantee. They therefore attract less dirt and evil odors, and secure a more undisturbed sleep."

"The Blankets and Pillows of camel-hair wool retain the peculiar odor which proceeds from the camel, and which is an excellent remedy (long known in the East) for soothing the nerves; consequently the sleep which these articles induce is still more quiet and refreshing than in the case of the coverlets of sheep's wool. Camel-hair Wool Blankets are especially to be recommended to nervous persons and sufferers from sleeplessness."

These Blankets and Lap Robes may, therefore, be considered indispensable to all who adopt the Sanitary Woollen System of Dr. G. Jaeger; and they will be found of the greatest use to travelers (protecting against damp and unclean beds) and sportsmen, as well as for driving, and for carriage rugs.

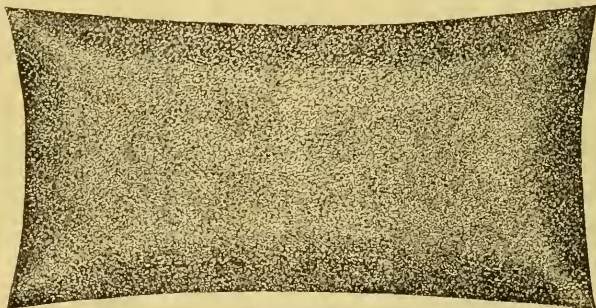

All the blankets manufactured for us, under instructions from Dr. Jaeger, are of Pure Camel Hair, Natural Color.

PURE CAMEL-HAIR PILLOWS.

No. 1.

These Pillows are superior to any ever before brought to this country, being woven from pure camel-hair and filled with pure camel-hair, excepting a thin intermediate layer of curly horse hair, which increases the softness and elasticity of the Pillows.

No. 2.

No. 1—13x21 inches.....	Small.....	3 00

DR. G. JAEGER'S SANATORY WOOLEN OUTER-CLOTHING FOR MEN.

No one, on reflection, will dispute that outer-clothing is ordinarily constructed without any reference to Sanitary principles. It fails to afford adequate protection to the body against chills, because it admits draughts of cold air up the coat sleeves and trouser legs, under the arm pits and in at the bosom. A crowning absurdity is the practice of cutting away the outer-clothing over the delicate organs of the chest, which are left to be protected only by the shirt front. Again, in hot weather, ordinary outer-clothing becomes hot and uncomfortable to a point at which relief can only be obtained by its removal. This is due to the imperviousness (to water or vapor) of the material—especially of the lining, padding, backing of waist-coat, etc.—confining the heat and exhalations from the skin.

Dr. Jaeger's Sanatory Woolen Outer-Clothing is constructed, as will be seen below, to obviate these serious evils, and those who adopt it may, in addition to its beneficial effects upon the health, count upon an immense addition of personal comfort at all seasons, whether hot or cold, and may rely upon adequate protection to the body against changes of temperature, however sudden and severe.

The material consists, throughout, of pure animal wool, sanitarily dyed or of the natural color, and offers as little impediment as possible to the passage of the exhalations from the skin.

"As exhaled vapors move in a straight direction, they are impeded by accumulation of web over web, the fibers of the upper layer obstructing the pores of the lower. The ordinary waistcoat, between coat and shirt, and padding in the coat, may therefore be dispensed with."

"The clothing fits so closely that the air between it and the body cannot move in an ascending direction, thereby producing a draught of cold air from underneath. This close fit is obtained by the employment of as elastic a web as possible—"the stockinet"—both for over and under-clothing. The coat buttons compactly to the figure, and is well closed at the throat, SO AS TO MAINTAIN UNIFORM WARMTH OVER THE WHOLE BODY.

"Those to whom this may seem irksome, will find it so only at the very first. Every soldier will bear witness to the comfort of the buttoned-up coat."

"A double thickness of material from the throat to the abdomen gives additional warmth along the middle line of the trunk, to which the blood-vessels converge; these are thereby expanded and the skin exhales more freely and rapidly. The sleeves of the coat are lined with woollen material, and these, as well as the trousers may be closed against upward draughts of air by webbing sewn in, fitting around the arms and legs—MAINTAINING AN EQUAL TEMPERATURE and preventing the possibility of local chills."

NORMAL BRUSH FOR WOOLEN GOODS.

ADVANTAGES:

They are made of ARTIFICIAL BRISTLES from Vegetable Fiber—by a process invented and patented by F. KUNZ, of Germany.

The bristles prepared for these Brushes are more effective than ordinary animal bristles in removing dust.

The rhomboid shape of the brush nicely adapts it to the removal of lint and dust from folds and corners.

It does not abrade or injure the cloth. Price, 75c.

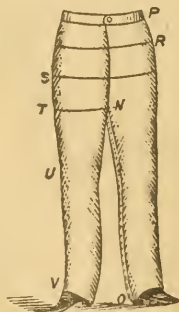

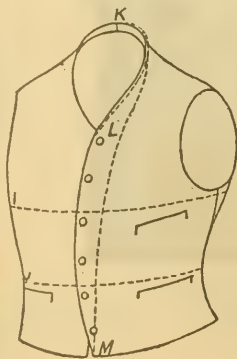

SOLE IMPORTERS AND EXCLUSIVE MANUFACTURERS

THE TAILORING DEPARTMENT

Will adapt our Superior, All-Wool Fabrics to the Most-Fashionable Styles of Men's Clothing, using only Pure, All-Wool Goods throughout. Our Business Suitings and our Elegant Dress-Suit Fabrics cannot be excelled, as they are the very Best Goods Made and are in beautiful fabrics and styles.

Provided with one of the Best Cutters in the city, and with ample facilities for speedy work, we shall have special pains taken to conform the Sanitary idea to the prevailing styles among Gentlemen requiring First-class Goods with Superior Workmanship.

Those who prefer to have their garments made by their own tailor, can purchase our Superior Fancy Coatings, Suitings and Cloths, Linings and Trimmings by the yard.

DIRECTIONS FOR MEASUREMENT FOR MEN'S AND BOYS' OUTER CLOTHING.

Back..... Frock..... Age..... Weight.....
Bound..... Stitched..... Height..... Size of Shoe.....
(Note.—All measures to be taken moderately close—not tight.)

COAT MEASURE.—To be taken over the Coat, with Coat buttoned. Take Overcoat measurement the same, including hip-seat and full-length measure. Measure width of Coat from shoulder to buttons.

Collar seam—A to B.....
" A to W (natural waist).....
" A to C (artificial ").....
" A to D (length desired).....

Middle of back—E to F.....
" " " to elbow—G.....
" " " to full length of sleeves—H.....

From A to front of arm—K.....
" around front under arm to A, with arm at side.....
" " " to B.....
" " " to W.....

Around breast, at I—under the Coat and over the Vest.....
" waist, at J.....

VEST MEASURE.—To be taken over the Vest.

Vest with or without collar.....
From seam at back of collar (K) to opening (L), as desired.....
" " " (letting the tape line follow the dotted line to M), for full length.....

Around breast, at I.....
Waist, at J.....

TROUSERS MEASURE.—Draw up well in the crotch while measuring.

Pockets desired.....
Outside seam—from seam of waistband to heel of shoe.....
Inside " " N to heel of shoe (O).....
Around waist, under the Vest, at P.....
" hip—R.....
" seat—S.....
" thigh, on side of dress (left leg)—T.....
" knee, at U.....
" bottom, at V.....

STYLE OF COAT.—Give full description of how to be cut and made.

Was measure taken over heavy or light suit?.....
Does he naturally stand erect?.....
Has he naturally square or stooping shoulders?.....
Has he sloping shoulders?.....
Does he desire Coat to be extra-heavy padded on shoulders?.....

P. S.—The natural waist is above the hip-bone, or between the hip-bone and lowest rib. To get length of sleeve of coat, let the person hold his hand about twelve inches from his breast. When taking measurements, let the person stand in a natural, upright, restful attitude, and look "straight ahead"—not at floor or ceiling.

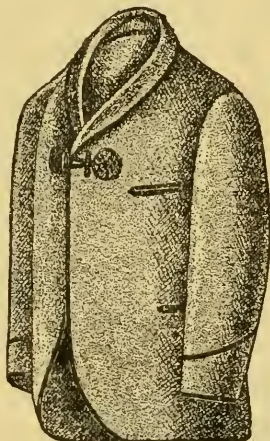

MEN'S DRESSING-GOWNS

AND

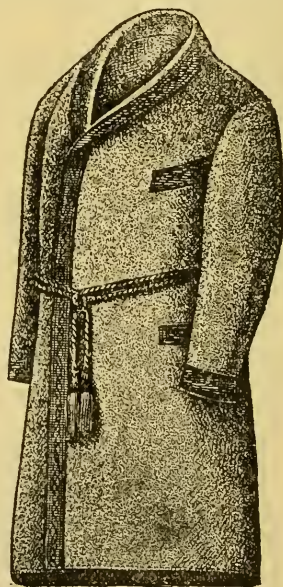

SMOKING (OR LIBRARY) JACKETS,

Kept in stock, in great variety; made from Camel-Hair Fleece or Double-Faced Velour; very soft and fleecy. The goods used are very thick ($\frac{1}{4}$ inch), yet soft and yielding to the touch; in medium or delicate shades; also in the darker plain shades.

As a HOLIDAY PRESENT nothing could be more appropriate or acceptable than one of these beautiful and luxurious garments.

SOLE IMPORTERS AND EXCLUSIVE MANUFACTURERS

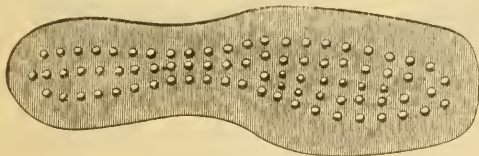

BOOT-AND-SHOE DEPARTMENT.

The **Dr. Jaeger Sanatory Boots and Shoes** are all constructed of the best materials and after the latest and most-approved styles worn in the United States. In shape, beauty, perfection of fit, agreeableness and healthfulness, these articles of the Jaeger System are not only not surpassed, but demonstrably unequaled by anything in the line offered to the public.

They are all made upon *strictly sanitary principles*, without sacrifice of symmetry and without offense to good taste.

The leather and other materials are especially prepared with a view to durability, lightness, warmth, and the free transpiration of moisture, and the consequent freshness of the air within the Shoes — conditions indispensable to a healthy state of the feet, without which perfect *general* health is impossible. The foot nowhere comes in con-

tact with the leather, but is completely enveloped in a fine woolen or camel-hair fabric of the Jaeger manufacture, with which the Shoes are lined. A soft

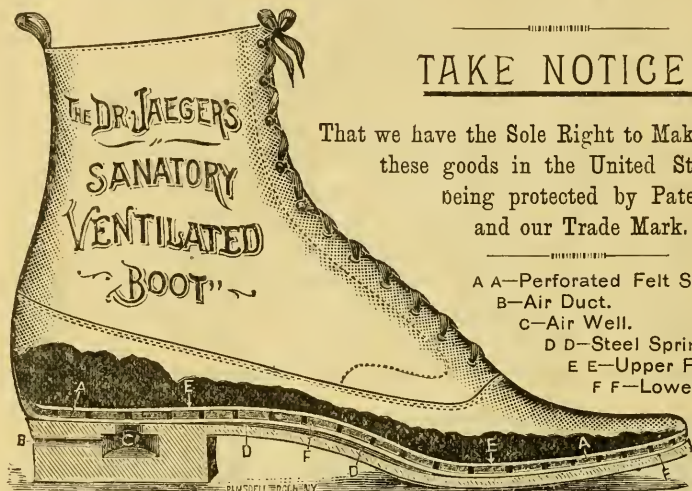

WOOLEN-FELT SOLE is interposed between the bottom of the foot and a freely-perforated felt insole, which, in its turn, is underlaid with another felt sole, resting, at the arch of the instep, upon a light steel spring, to augment the “pumping” action of the system in walking; to all of which air is admitted through a small channel, opening externally and posteriorly in the lower part of the heel, and thus, by the action of the foot in walking, ensuring a ventilation of the shoe and foot attainable in no other way.

It is by reason of this construction and combination of materials in connection with the pure, woolen sanatory socks, and stockings, that the **JAEGERS BOOTS AND SHOES** are so highly sanatory, being both curative and preventive of the various disorders to which the feet are subject. Weak feet are hardened by the unimpeded evaporation set up; the joints are strengthened; corns, and other troubles from undue pressure, are prevented.

THE DR. JAEGER SANITARY VENTILATED BOOTS AND SHOES.

SECTIONAL VIEW.

The Shoes offered are *strictly first-class* in every way. The purchaser will find them ELEGANT, COMFORTABLE AND DURABLE.

The customer, once fitted, can obtain the same size and quality, at any future time, with assurance of a fit, by ordering the same number, without re-measurement.

Our Shoes can be repaired by any good Shoemaker.

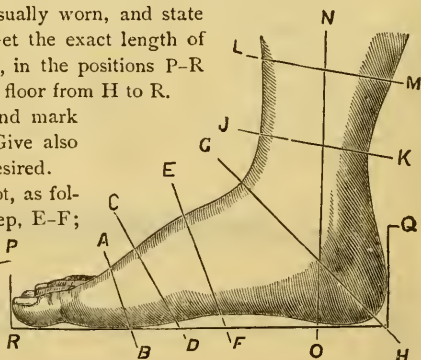

DIRECTIONS FOR MEASUREMENTS FOR NORMAL BOOTS AND SHOES.

When ordering, give size of shoe usually worn, and state whether an easy or close fit is desired. Get the exact length of the foot by placing a book, or postal card, in the positions P-R and Q-H, and taking the distance on the floor from H to R.

Place the foot on a sheet of paper and mark with a pencil the outline of the foot. Give also the outline of the sole of Shoe worn or desired.

Also, give dimensions of parts of foot, as follows: The joint, A-B; waist, C-D; instep, E-F; heel, G-H; ankle (smallest diameter), J-K.

Measure the circumference of leg (L-M) at the top of the shoe, giving the height (N-O), in inches, of the shoe required.

\$1.00 a pair extra for all Shoes made to order.

We solicit correspondence in regard to our Boots and Shoes, and we especially invite the **MEDICAL PROFESSION** to a critical examination of them.

SANATORY WOOLEN-FELT SWEATS.

This "Sweat" is one of the gems of the Jaeger System. It is warm in winter, and in the hottest weather it keeps the head dry and cool, in virtue of its peculiar action upon the perspiration of the forehead.

Wide—2½ inches..... 50c. | Narrow—1¾ inches..... 40c.

FOR THE UNITED STATES AND TERRITORIES.

SANATORY UNDYED, NATURAL, KNITTING YARN.

This Sanatory, Natural Knitting-Wool is—

1. **Very durable**, because made from the best long staple, Carded Wool, free from waste wool in any form.
2. **Undyed**—that is, it is not treated with any coloring matter. Therefore, being natural, in addition to its durability, and its positive hygienic qualities, it possesses a negative virtue, in that no dye can come off on the skin; while dyed yarns are often troublesome, in this respect, and sometimes produce evil consequences. Nor does it lose its natural color, either from perspiration or washing. And it retains its softness—which specially recommends it to sensitive persons.
3. **It preserves**, in their integrity, the Sanatory qualities and peculiar electricity of the natural, living, healthy wool, as evidenced by its fresh odor and softness, and is therefore most valuable to those who suffer from tender feet.

With the Sanatory Natural Knitting Wool, socks, etc., can be knitted of the same material and shades of color as those used in the manufacture of the Sanatory Woolen Under-Clothing. The wool can be had in

Dark and Light Natural, Black, and White, fine quality, 3, 4, 5 and 6-thread.....A pound, 2 50

CAMEL-HAIR YARN.

A very fine, soft yarn is also made from pure Camel-Hair, Natural Color.

Yarns are sold in quarter or half-pound packages.....A pound, 2 50
Also in skeins.....Each, 8c., 16c. and 38c.

WOOLEN DARNING YARN.

For mending; different colors; in balls.....Small size, 10c.; large size, 40c.

READ THIS PAGE.

“The first wealth is health.”

EMERSON.

“But you are to consider throughout, much more than is done at present, and what it would have been a very great thing for me if I had been able to consider, that health is a thing to be attended to continually; that you are to regard that as the very highest of all temporal things for you. There is no kind of achievement you could make in the world that is equal to good health.”

CARLYLE.

It is not a little remarkable that, nearly a hundred years before Dr. JAEGER electrified the world by the announcement of his Sanitary Woolen System, all or nearly all its leading features had been promulgated by one of the most-distinguished scientific explorers the world has ever produced—Count RUMFORD.

Recognizing, on hygienic principles, the importance of clothing, he prosecuted a series of the most elaborate experiments to determine the relative values of the materials in use for that purpose—especially wool, linen and cotton. We have space for only some of the results of these extraordinary experiments.

After showing that the absorptive capacities of sheep's wool and cotton, for water in its “elastic state,” (the condition of the “insensible perspiration,”) are relatively as 1163 to 1089, he goes on to say:

“Woolen clothes greatly promote insensible perspiration, owing to the strong attraction which subsists between wool and watery vapor which is continually issuing from the human body. It (the insensible perspiration) is evidently not due to the warmth of the covering, for the same degree of warmth produced by more clothing of a different kind, does not produce the same effect.

“The perspiration of the human body, being absorbed by a thick covering of flannel, it is immediately distributed through the whole thickness of the substance, and by that means exposed by a very large surface to be carried off by the atmosphere; and the loss of this watery vapor, which the flannel sustains on the one side, by evaporation, being immediately restored from the other, in consequence of the strong attraction between the flannel and this vapor, the pores of the skin are disencumbered, and they are continually surrounded by a dry, warm, and salubrious atmosphere.

“I am astonished that the custom of wearing flannel next the skin should not have prevailed more universally. I am confident it would have prevented a multitude of diseases; and I know of no greater luxury than the comfortable sensation which arises from wearing it, especially after one is a little accustomed to it.

“It is a mistaken notion that it is too warm a clothing for summer. I have worn it in the hottest climates, and in all seasons of the year, and never found the least inconvenience from it. It is the warm bath of a perspiration, confined by the linen shirt, wet with sweat, which renders the summer heats of the tropical climates so insupportable; but flannel promotes perspiration, and favors its evaporation; and evaporation, as is well known, produces positive cold.

“I shall be happy, however, if what I have said or done upon the subject should induce others to make a trial of what I have so long experienced, with the greatest advantage, and which, I am confident, they will find to contribute greatly to health, and, consequently, to all the other comforts and enjoyments of life.

“I shall then think these experiments, trifling as they may appear, by far the most important ones I have ever made.”

See Count RUMFORD's works, vol. I, pp. 233-236.

“TO KEEP WELL IN SUMMER, the clothing should be light, and that worn next the body should be of some material capable of readily absorbing the perspiration. Wool is probably to be preferred, and it should be pure—that is, unmixed with cotton.”

DR. WM. A. HAMMOND, Late Surg.-Gen'l U. S. Army.

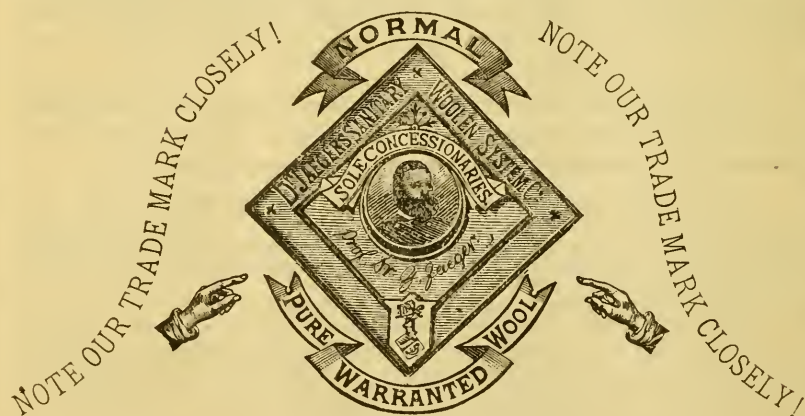

CAUTIONARY NOTICE

TO THE PUBLIC.

All Who Desire the Woolen Fabrics, especially Underwear, manufactured and imported exclusively by the

DR. JAEGER'S
SANITARY WOOLEN SYSTEM CO.,

are CAUTIONED not to purchase the imitations, closely resembling the genuine, which are on the market.

The GENUINE Goods all have our Trade Mark, and can be procured in New York City and vicinity ONLY at our own Houses: 97 FRANKLIN ST., NEW YORK (at Wholesale);

827-829 BROADWAY, near 12th Street, NEW YORK,

119 NASSAU STREET, Temple Court Building, NEW YORK;

504 PULTON ST., next Y. M. C. A. B'd'g, BROOKLYN, N. Y.

The JAEGER GOODS can be had nowhere in the United States except at the Company's Houses, and from Dealers to whom the Company concede the right to sell, (see list of Agents in front of this Catalogue,) and they are sold at all these Houses at the uniform Catalogue prices.
